

COMPARTMENT SAM

Here at Key Systems, Inc., we often design and create a product to fit a customer's specific need. This is how our modular SAM came to be.

Using GFMS technology, this SAM configuration enables you to secure and monitor even the smallest of assets in individual locked compartments. The unit shown on the left offers a deeper cavity. The unit on the right provides an added layer of security by enclosing the compartments behind a 16-gauge steel door. Both styles come in a variety of sizes. Please call for more information!

The Options are Endless:

- Pagers
- Mobile Phones
- Cameras
- MP3 Players
- Important documents
- And the list goes on...

Have the peace of mind that you know where your assets are at all times!
